"We were soon introduced to Globalstar's satellite solutions and realized we found our silver bullet for our needs." - Robert Ritger, Coordinator at Wisconsin Health Resources and Services Administration

The Authority on Emergency Preparedness

Meeting the Qualifications and Needs of Emergency Communications on the National Level

Homeland Security Grant Programs
*State Homeland Security Program (SHSP)
*Urban Areas Security Initiative (UASI)
*Operation Stonegarden (OPSG)

Planning for emergencies is something we usually don't do until after it happens, which is always too late. Hindsight is clearest and Globalstar is here to give you that clarity.

Globalstar meets all Federal SAFECOM standards and requirements for public safety wireless communications interoperability when facing a disaster or terrorist attack. The Globalstar satellite system operates independent of regional terrestrial infrastructure. This means we work even when cell and landlines don't, and we all know that can happen during a disaster or terrorist attack.

Interoperability, as defined by FEMA, is "The ability for emergency management/response personnel and their affiliated organizations to communicate within and across agencies and jurisdictions via voice, data, or video-on-demand, in real-time, when needed, and as authorized." Globalstar's complete family of products allows you to seamlessly interconnect with any other communication solution, i.e. cellular, Wi-Fi, Land Mobile Radio, other MSS devices, etc., making it the fastest and most reliable platform, providing instant infrastructure.

OPERABILITY BENEFITS OF GLOBALSTAR:

- **Instant Infrastructure –** Globalstar supplies communications in areas where existing infrastructure is outdated, insufficient, or damaged.
- **Independent of Terrestrial Infrastructure –** Globalstar provides redundancy in the case of terrestrial network outages. Business, recovery efforts and communication between loved ones never has to stop when using Globalstar.
- **Temporary Network Solutions –** For homeland security or military activities, Globalstar can often provide the only practical, short-term solution for getting necessary information in and out such as phone calls, emails or document and image sending.
- **Rapid Provisioning of Services –** Since satellite solutions can be setup quickly using the Globalstar GSP-1700 mobile satellite phone or the Globalstar Sat-Fi®, the world's most powerful satellite hotspot, you can achieve a high level of communications rapidly without high budget expenditures.

VOICE & DATA SERVICES

Mobile satellite devices are the most promising application of satellite services in the face of an emergency or disaster. The GSP-1700 and Sat-Fi are the perfect example of this, offering:

- **Crystal-Clear Voice Quality –** No "tunnel sound" like the competition and clarity is key when trying to coordinate rescue efforts or evacuations.
- **Fastest Data Speeds –** Globalstar is 4X faster than the competition, meaning critical emails, documents and images are sent and received faster with Globalstar. During emergencies, every second matters.
- **Most Affordable Airtime Plans –** Globalstar's industry low airtime plans allow you to stretch your budget much further.
- **U.S.- based Phone Number –** When disaster strikes, dialing needs to be simple. Globalstar couldn't be easier using the standard: 1 + area code + number. **This gives you direct dialing of 911 services right out of the box.** Our competitors use country codes making dialing very difficult.

Emergency Communications Solutions from Globalstar

Globalstar meets all Federal SAFECOM standards and requirements for public safety wireless communications interoperability.

GSP-1700
Mobile Satellite Phone

- Crystal-clear voice quality, simple 10-digit dialing and a U.S.-based phone number
- Utilizes Globalstar's fastest data speeds – **4X faster than the closest competitor** (9600 hotspot required, sold separately)
- Most affordable handset in the industry
- Buy now and get it **FREE** for a limited time!

"When it came time to provide satellite service to officials of the Boston Marathon, Globalstar is who we trusted to keep everyone connected in case other forms of communications failed for any reason." - Chris Laquidara, Director of Operations for All-Comm Technologies

Meets the following FEMA AEL Codes: 06CC-03-SATM – Satellite communication device, Mobile phone; 06CC-03-SATP – Satellite communication device, Handheld phone; 06CC-03-SATP – Satellite service (voice) with Handheld device; 06CC-03-SADS – Satellite data services (Internet and data)

Sat-Fi
The World's Most Powerful Satellite Hotspot

- Uses your existing Wi-Fi enabled devices to send and receive calls, emails and text messages
- Utilizes Globalstar's fastest data speeds – **4X faster than the closest competitor**
- Crystal-clear voice quality and simple 10-digit dialing while using your existing device contacts

"We place primary reliance on Globalstar's satellite services and expect to do so for the foreseeable future." - Commander Francis Moore, Special Operations of Kern County, CA Sheriff Department

Meets the following FEMA AEL Codes: 06CC-03-SATM – Satellite communication device, Mobile phone; 06CC-03-SATP – Satellite communication device, Handheld phone; 06CC-03-SATP – Satellite service (voice) with Handheld device; 06CC-03-SADS – Satellite data services (Internet and data); 06CC-02-2WAY – 2-way text messaging device; 06CC-03-SATB – Satellite communication device, Fixed phone

---

(connects to standard analog phone - not included)

GSP-2900
Fixed Phone System

- Versatile fixed satellite phone system
- Utilizes Globalstar's fastest data speeds - **4X faster than the closest competitor**
- Crystal-clear voice quality with connection for up to 5 analog phones
- Easily connects to a 12V generator or solar power system when standard 110V power goes down

"I have had a phenomenal experience with Globalstar. Their products work where and when you need them and offer excellent communication abilities." – Robert Berger, Facility Director, Maniilaq Health Services of Alaska

Meets the following FEMA AEL Codes: 06CC-03-SATB – Satellite communication device, Fixed phone
