

26 February 2017

Declaration of ISO 9001:2015 Compliance

GIT Satellite, LLC., a woman-owned small business, was initially certified as ISO 9001:2008 in September 2007 by NSAI, an accredited registrar by ANSI-ASQ National Accreditation Board (ANAB).

GIT has passed all surveillance and re-certification audits from 2007 through 2016, with no major findings. As a cost savings measure, GIT elected to adopt ISO Compliance for 2017.

GIT has maintained and continues to use all certified processes and procedures developed under the ISO certification process. These processes and procedures are continually used on a daily basis to ensure accurate and consistent quality performance of all our business processes.

GIT has updated all processes and the GIT Quality Management System (QMS) manual to conform to the most current ISO quality standard - ISO 9001:2015.

GIT continues to perform the formal internal annual ISO audit using the procedures used in the previous certified years. Based on this successful internal audit, GIT Satellite, LLC., declares the company and policies in compliance with ISO Standard 9001:2015.

GIT Satellite actively maintains all processes and procedures and the QMS throughout the year to insure that the QMS and procedures are current and up-to date.

GIT invites all customers and vendors to audit GIT Satellite at any time, to ensure confidence that GIT is maintaining its quality management system in accordance with the ISO standard.

Signed

Ginger P. Washburn
President and CEO
GIT Satellite, LLC.
